

SOW MEAL CONTROL

FOR SOW IN INDIVIDUAL CRATE

Efficient & clever individual feeding system.

The Sow meal control "SMC" smart dispenser was created to increase the sow's feed intake during Insemination, Gestation and Farrowing time. With the smart Stirrer system connected, the SMC dispenser allows to follow individually the feed consumption per sow.

The SMC smart dispenser allows to the farmer to indicate the maximum feed quantity available according to each sow. With the smart stirrer system, the sow can request the feed by itself according to its rhythm. Directly connected to the smartphone with ASSERVA app, all the management and consumption historics can be configurable and available for consultation in front of the sows or remotely.

In option : The SMC smart dispenser can be equipped with an unique patented system to improve the feed drop (Meal, flour). The SMC smart dispenser can be install to distribute 2 typ of feeds.

CONTROL

checking of the feed distribution per each sow

EASY

Easy to install and easy to use in any typ of existing crates

FEEDING

Control the feed distribution according to the sow needs.

LONG LIFE

Increase the body conditions of the sow.

PERFORMANCE

Make better the piglet number and the piglet weight

CONNECTIVITY

Centralization of the data and the control available. Compatible to use with the Big data management softwares.

EFFICIENT & CLEVER INDIVIDUAL FEEDING SYSTEM FOR SOWS

SYSTEM USING NFC TECHNOLOGY

SCREW DOSING FOR FLOUR AND GRANULES WITH FLOW CONTROL SYSTEM

PROBE FOR DISTRIBUTION MANAGEMENT

ADVANTAGES

- | Increase the feed intake of the sows.
- | Improve the efficiency of the sow (fertility, piglets weight, longer sow life...)
- | Independant system without any Wifi system needs.
- | Centralization available to manage the system via PC.
- | Ad libitum consumption of the sow.
- | 50% cheaper than current systems.
- | Simple system adapted to animals.
- | Evolutionary system.
